

ENVIRONMENT DIFFERENTIAL TOOLKIT

CONSISTENT SYNCHRONIZATION

Reliable. Consistent. Confident.

If you can't trust the data, you can't do business. You need your information to sync across environments reliably and consistently. Our Environment Differential Toolkit keeps you moving forward with confidence and peace of mind.

The Environment Differential Toolkit takes the guess work out of your business, allowing for rapid reconciliation of environment discrepancies.

- Understand environment differences quickly
- Visibility to policy and configuration differences
- Execute project with confidence that environments are aligned

ENV DIFF TOOLKIT FROM ASCENSION LOGISTICS

- Identify environment differences across multiple instances:
 - Commands
 - Library Versions
 - Component Versions
 - Systems Configurations
 - Warehouse Policies
 - MOCA Registry Settings
- Find values across the system
- Rectify affected data and re-sync quickly and easily
- Identify opportunities for system improvement

SPEED. VISIBILITY. EMPOWERMENT.

When you have multiple instances of the same JDA/RedPrairie application running across your system, it's common for them to get out of sync. This can become a big problem when you need to reconcile all the instances to a common code base and configuration.

The Environment Differential Toolkit from Ascension Logistics is a collection of tools developed to help customers with environment discrepancies. The tools allow you to quickly understand object, code and configuration differences across environments, giving you quick visibility, rapid reconciliation and trust in the data at hand.
